

Archive, Access & Protect your priceless files

How does VAULT SERVICES work?

Account Features:

Backup an unlimited number of desktops or servers, compare that to other providers

Access your data from any computer with Internet access

Your data is private, safe and secure with AES 256-bit military-grade encryption

Share your files with coworkers, clients, vendors and others

Rest assured your data is safely stored in multiple geographic locations

Schedule your backups to occur weekly daily, hourly or continuously

Archive, Access & Protect your priceless files

Why backup to the cloud?

-  Cloud backup is cheaper and more efficient than its predecessor, tape backup.
-  External drive backup just isn't enough. External drives crash, and you need your data in multiple geographic locations in case of a data loss emergency.
-  In the event of hard drive failure, theft, natural disasters, or human error, you could lose all your irreplaceable files and other digital data.
-  All your backed up files are fully accessible from any computer with Internet access.
-  Your data is securely encrypted with AES 256-bit military-grade encryption.
-  You can easily share files, including large files where email just won't cut it, directly from your account.
-  Automated backup program lets you 'set it & forget it'.
